H. Cegielski - 150 years of tradition

Heinrich Cegielski 1818 - 1888

In 1818, there had been 150 years since Master Cegielski, a master of art, industry and high-class teacher, had died his beloved father. The origin of the firm go back to an American flour entrepreneur in 1846 in which a firm entrepreneur ship was founded. It encompassed the area from a flour mill, manufacturing equipment and other tools, engineering and engineering the people. Gradually, an American identity came, the American was also expanded to include more engineering and the last industrial machine, machine and steam locomotives. The last mentioned were the work of Master Cegielski's factory in his home country and his home town. It was clearly that the firm became an international institution. The basis of the firm's development was the first Grand County of Upper and Lower Austria and Bohemia, Cegielski's products encompassed a wide range of industrial and home and abroad. Among them were mechanical and agricultural machines, lathes and lathes. In 1898 the firm was incorporated in the Grand County of Upper and Lower Austria.

From the first engineering experience in 1846, the firm had a long and successful history of manufacturing. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded.

Gradually, more types of steam engines were introduced and went on to develop other types of machinery. In 1888, the firm was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded.

During the Second World War (1939-1945), Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded.

In 1945, Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded.

In 1945, Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded.

In 1945, Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded.

In 1945, Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded.

The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded. The firm's success brought them into the top and only after 4 years, in 1898, H. Cegielski AG was founded.

The specialties of the Biele machine building following production facilities:

- marine and stationary diesel engines (100-20,000 kW), compressors and turbochargers, water pumps,
- marine and stationary generating sets and related, accessories for diesel engines,
- steam generation submersible systems,
- compressors for marine vessels, compressors for power plants (50-1000 kW),
- turbochargers for power generation plants and chemical, paper, chemical and mining industries,
- turbine systems,
- gas flow turbines,
- compressors and turbochargers for passenger cars and trams, compressors for chemical plants,
- cooling and heating systems,
- diesel engines (including the 1000 kW),
- compressors (compressors for chemical, paper, chemical plants),
- turbine systems (using special machine tool technology, mechanical engineering, and design).
