

*WORLD LEADERS  
In Marine Propulsion*

**SEA-TEK**

ADVANCED MARINE PROPULSION TECHNOLOGY

1. **High pressure compressor** – Compresses the incoming air before it enters the combustion chamber. The rotating air compressor is driven by the turbine section.

2. **Variable stator vanes** – These are part of the compressor and can move to change the angle of the blades to improve efficiency.  
 3. **Low pressure compressor** – Compresses the air before it enters the combustion chamber. It is driven by the turbine section.

4. **Wing** – Structures on both sides of the fuselage.  
 5. **Engine** – Drives the air through the engine.

6. **High pressure turbine** – Drives the compressor and the fan. It is driven by the low pressure turbine.

7. **Low pressure turbine** – Drives the compressor and the fan. It is driven by the high pressure turbine.

8. **Exhaust** – The air is exhausted through the exhaust system.

9. **Exhaust** – The air is exhausted through the exhaust system. The exhaust system is driven by the turbine section. The exhaust system is driven by the turbine section.

10. **Exhaust** – The air is exhausted through the exhaust system. The exhaust system is driven by the turbine section. The exhaust system is driven by the turbine section.

11. **Exhaust** – The air is exhausted through the exhaust system. The exhaust system is driven by the turbine section. The exhaust system is driven by the turbine section.

**MOTORI CON CIRCUITO  
DI RAFFREDDAMENTO CHIUSO  
A LIQUIDO SIGILLATO**

- Con un motore a gas il motore si riscalda a punto di blocco. Ma lo scambiatore assicura per il motore più.
- Per tutti i gruppi manifatturieri, rispetto al motore a combustione interna di serie.
- Capacità di raffreddamento superiore a 100.
- Sempre in grado di ridurre il consumo di carburante.

**ENGINES WITH CLOSED  
LIQUID COOLING SYSTEM**

- The engine will heat up to a point where it will block. The heat exchanger ensures the engine runs.
- Good weight of the cooling system allows to the open circuit (100% by way).
- Capacity of the water-based system 100.
- No engine blockage compared to the open circuit engine.

#### ❖ CAMELS OF ICEBERG

Icebergs at the surface. Ocean water is colder.

#### ❖ COMBUSTION CHAMBER

High combustion chamber. Hot gases go out.

#### ❖ BURNER AREA

Large chamber. Hot gases of fuel and oxygen/air flow out.  
Cooled by air.

#### ❖ EXHAUST NOZZLE

Hot air expands out. Hot gases flow out. Hot gases flow out.  
Cooled by air.

#### ❖ CORE COOL

High combustion chamber. Hot gases go out.

#### ❖ COOL AIR

Hot gases flow out. Hot gases flow out. Hot gases flow out.  
Cooled by air.

#### ❖ PISTON

Large chamber. Hot gases of fuel and oxygen/air flow out.  
Cooled by air.

#### ❖ PISTON

Hot air expands out. Hot gases flow out. Hot gases flow out.  
Cooled by air.

#### ❖ FUEL IN

Hot air expands out. Hot gases flow out. Hot gases flow out.  
Cooled by air.

#### ❖ AIR EXHAUST

Hot air expands out. Hot gases flow out. Hot gases flow out.  
Cooled by air.

# MOTORI SEATEK SEATEK ENGINES

Autoreg. S.P.A. S.p.A.  
di Bologna

	Cilindri (Disposizione)	Potenza (CV/kW)	Vel. km/h	Peso kg/lbs	Consumo litri/galloni/ora
<b>5-6V-9</b> Cilindri - 5/6/9	60/6	40/29 (28/20)	1.000	100 kg	23 g/galloni
<b>6-6V-9</b> Cilindri - 6/6/9	60/6	40/29 (28/20)	1.000	100 kg	23 g/galloni
<b>6-4V-10</b> Cilindri - 6/4/10	60/6	50/37 (37/27)	1.000	100 kg	23 g/galloni
<b>6-4V-10</b> Cilindri - 6/4/10	60/6	50/37 (37/27)	1.000	100 kg	23 g/galloni

## SEATEK RACING\*

	Cilindri (Disposizione)	Potenza (CV/kW)	Vel. km/h	Peso kg/lbs	Consumo litri/galloni/ora
<b>7,8 Offshore</b> (2.1 x 1)	70/8	50/37 (37/27)	1.400	100 kg	28 g/galloni
<b>9,1 Endurance</b>	70/8	50/37 (37/27)	1.400	100 kg	28 g/galloni
<b>10,3 Offshore</b> (2.1 x 1)	80/8	60/44 (44/32)	1.400	100 kg	28 g/galloni
<b>10,3 Endurance</b>	80/8	60/44 (44/32)	1.400	100 kg	28 g/galloni

\* Motori omologati per le competizioni  
Marine ed Offshore
