# Engines from Nordhausen since 1907.

In 1907, after 70 years of experience and knowledge engineering, we were able to build the first diesel engine. The following years followed, such as the first Nordhaus diesel for the agricultural sector, from 1918, the first Nordhaus diesel engine for marine applications.

- for the marine sector
- for the power engine sector

Since 1968, the company will be known worldwide by a single name: Diesel-Industrie AG Nordhausen. Our products are all under the registered trade name of Diesel-Industrie AG Nordhausen.

Today's Diesel-Industrie AG Nordhausen is offering:

- Diesel Engines
- Gas Engines
- Gas Engines

in various sizes from 1000 to 1000000, with all accessories and spares and a professional staff.

Our engines are available:

- agricultural engines
- stationary diesel engines
- marine engines
- gas engines
- gas engines
- gas engines
- gas engines
- gas engines

We are now offering 2 new models: the 1000000 and the 1000000. For the 1000000 and 1000000, the 1000000 and 1000000.

## DIESEL ENGINES

### ... Engine design of 1000 hours maintenance

Small engines for the construction industry are now for 1.4 million hours of service life.

#### ... reliable operation ... value

With modern engines, the engine oil will not need to be changed and the engine will last for 1000 hours. The engine will last for 1000 hours of service life. The engine will last for 1000 hours of service life.

The engine will last for 1000 hours of service life. The engine will last for 1000 hours of service life. The engine will last for 1000 hours of service life.

The engine will last for 1000 hours of service life. The engine will last for 1000 hours of service life. The engine will last for 1000 hours of service life.

## PLANT OIL ENGINES

### ... an environmentally friendly alternative

Plant oil engines are an environmentally friendly alternative.

- ... low oil consumption
- ... low noise
- ... low emissions
- ... low maintenance

The engine will last for 1000 hours of service life.

- ... low emissions
- ... low noise
- ... low maintenance

Plant oil engines are an environmentally friendly alternative. They are low maintenance and have low emissions. They are low maintenance and have low emissions.

Plant oil engines are an environmentally friendly alternative. They are low maintenance and have low emissions. They are low maintenance and have low emissions.

## GAS ENGINES

### ... the cleanest generating of power

- ... low emissions
- ... low noise
- ... low maintenance

Gas engines are the cleanest generating of power. They are low maintenance and have low emissions. They are low maintenance and have low emissions.

Gas engines are the cleanest generating of power. They are low maintenance and have low emissions. They are low maintenance and have low emissions.

Gas engines are the cleanest generating of power. They are low maintenance and have low emissions. They are low maintenance and have low emissions.

## PLANT OIL ENGINES

### –Introduction and environmental benefits

There are several environmental benefits associated with the utilization of plant oil as a fuel for internal combustion engines. These include reduced emissions of greenhouse gases, reduced particulate emissions, and improved air quality in areas where it is used.

The use of plant oil as a fuel also reduces the dependence on fossil fuels, which are finite resources. Additionally, the use of plant oil can help to reduce the carbon footprint of the engine, as it is a renewable resource that can be produced sustainably.

### –plant oil as an alternative engine

Plant oil can be used as a fuel for internal combustion engines, such as diesel engines. However, it is important to note that plant oil is not a direct replacement for diesel fuel, as it has a higher viscosity and a higher flash point.

The plant oil can be used as a fuel for internal combustion engines, such as diesel engines. However, it is important to note that plant oil is not a direct replacement for diesel fuel, as it has a higher viscosity and a higher flash point. The plant oil can be used as a fuel for internal combustion engines, such as diesel engines. However, it is important to note that plant oil is not a direct replacement for diesel fuel, as it has a higher viscosity and a higher flash point.

We offer to you diesel engines,  
plant oil engines and gas engines  
within an output range from 50 to 210 kW  
(rate 1993)

#### DIESEL ENGINES

- |        |        |        |        |        |        |
|--------|--------|--------|--------|--------|--------|
