# BETTER PERFORMANCE with WISCONSIN Quality Built Air Cooled Engines

This engine has a rugged steel forged cylinder balanced crankshaft mounted on a cast steel tapered roller bearing. By this method it is fixed in steel forged connecting rod casting over the cast ball-bearing surface. This feature is important as it greatly resists shock transmitted into the crankshaft without any intermediate bearing surface.

Wisconsin Model 4000, with Flywheel Removed

The Wisconsin Model 4000 is quality built for a long life of trouble free performance. However, if service is ever required, all Wisconsin distributors and over 2500 Wisconsin authorized service stations located throughout the country will gladly help you from complete breakdown of factory recommended service parts.

The spark plug system of an engine is the heart of the engine. The variable magnet is self contained whether you wish to control just the spark plug or whether valve or pressure controlled pressure control demands the magnet to complete the operation. The variable magnet is not affected by adverse conditions inside or outside of the engine and will affect some types of spark systems that are divided between crankshaft breaker point type and magnet type.

## WISCONSIN MILWAUKEE POWER

Wisconsin or Milwaukee is available at your local Wisconsin distributor. Obtain copy of literature and make specifications known.

These authors also found that the use of a single, non-validated questionnaire to assess the prevalence of depression in the community was not sufficient to detect the true prevalence of depression. They concluded that the use of multiple, validated questionnaires would be more appropriate for the assessment of depression in the community.
