PERFORMANCE CONTROL

ENGINE FEATURES

POWER AND ECONOMY — FIVE BOLLING BLADES ON THE WATER GEAR

To ensure a performance unexcelled in power and fuel efficiency, the 2000 series incorporates a highly efficient water design. Five bolling blades on the water gear allow a smooth, yet highly efficient action which is both powerful and fuel-saving. This combination of power and efficiency allows the 2000 series to operate at a lower fuel consumption rate, and to provide a more powerful and efficient action. The bolling blades are also designed to provide a smooth, yet highly efficient action which is both powerful and fuel-saving. This combination of power and efficiency allows the 2000 series to operate at a lower fuel consumption rate, and to provide a more powerful and efficient action.

Five bolling blades for better handling

WATER GEAR

Water gear assembly for power and fuel

The 2000 series engine is designed to provide a smooth, yet highly efficient action which is both powerful and fuel-saving. This combination of power and efficiency allows the 2000 series to operate at a lower fuel consumption rate, and to provide a more powerful and efficient action.

High efficiency

The 2000 series engine is designed to provide a smooth, yet highly efficient action which is both powerful and fuel-saving. This combination of power and efficiency allows the 2000 series to operate at a lower fuel consumption rate, and to provide a more powerful and efficient action.

High efficiency
