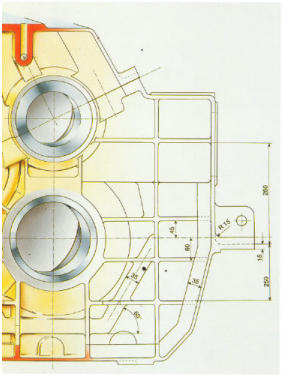
FAST VESSELS

REINTJES

16 FEBRUARY 1997

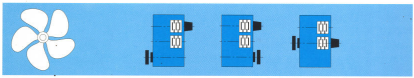


Our worldwide, service network and versatile system solutions guaranteeing cost-efficiency make us a first class partner.

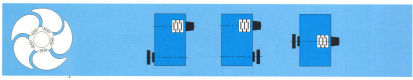
You can rely on us as the experienced specialists for high-speed gears in fast vessels.

THE EXPERTS

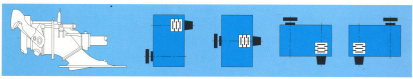
With its WVS and VLJ series, REINTJES offers mature drive solutions for a wide range of applications. Its well-designed modular system with thoroughly tested components from its range of gears for work



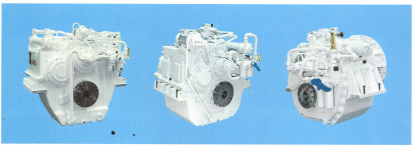
WVS series
Reverse-reduction gear for propulsion with fixed propeller



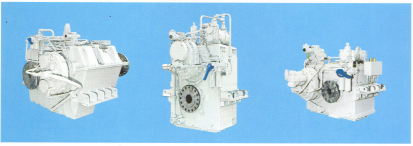
WLS series
Reduction gear for propulsion with controllable pitch propeller



VLJ series
Reduction gear for water jet propulsion



Some examples from our **WVS, WLS, VLJ** series for engine outputs of 800-6,500 kW.



boats is based on uniform design principles, making it possible to rationalize and systematize logistics, project and installation planning.

THE EXPERTS.

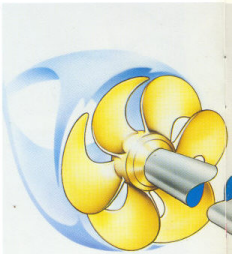
MASTERFUL

Propulsion plants for fast vessels have to be designed to provide optimal manoeuvrability for fully exploiting technology potentials and guaranteeing reliable operation.

REINTJES offers well-tested and reliable solutions for these special manoeuvrability requirements, also at low speeds.

1. Gears with additional drive (PTI solution)
For slow speeds, a switchable small diesel engine, electric or hydraulic motor drives the propeller instead of the main engine.

2. Two-speed gears (ZWVS)
For this solution, a slow-drive or fast gear can be selected in driving mode.



THE EXPERTS.
